

UX Design Storyboard

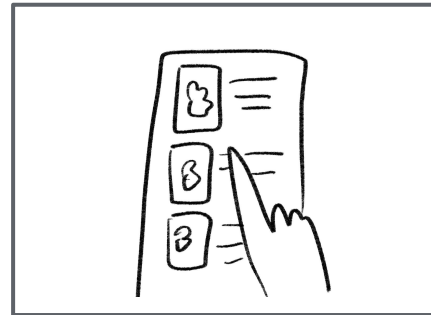

Scenario: An app for busy pet owners that will help track their pet's nutrition, exercise and overall health (close up)

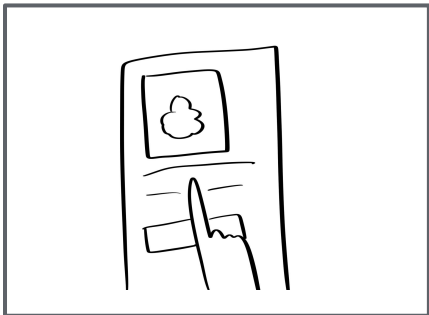

Kiara opens the app

She is able to create a customized profile for Puff, inputting info like weight, breed etc.

After she feeds Puff, she searches for the type of food on the app and adds it to the intake list.

Once inputted, Kiara is able to adjust the settings to tell the app Puff's regular diet

Over time, Kiara is able to see trends in the data displayed in visual charts

The app will send Kiara a notification when a change in diet or nutrition is needed.
